

1. Record Nr.	UNINA9910300096803321
Titolo	Cardiac Drugs in Pregnancy // edited by Karen Sliwa, John Anthony
Pubbl/distr/stampa	London : , : Springer London : , : Imprint : Springer, , 2014
ISBN	1-4471-5472-X
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (141 p.)
Collana	Current Cardiovascular Therapy
Disciplina	616.1061
Soggetti	Cardiology Obstetrics Maternal and child health services Pharmacotherapy Obstetrics/Perinatology/Midwifery Maternal and Child Health
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di contenuto	Introduction -- General principles and guidelines -- Management of Hypertension -- Management of Heart Failure -- Management of coronary artery disease & Arrhythmia -- Anticoagulation in Pregnancy -- Obstetric drugs in management of Cardiovascular disease -- Pregnancy anaesthesia in patients with cardiovascular disease.
Sommario/riassunto	In the western world, the risk of cardiovascular disease in pregnancy has grown due to the increasing age at the first pregnancy and the worldwide obesity epidemic leading to early diabetes and hypertension. As a result more women are requiring drug therapy during pregnancy and some data has shown an altered pharmacodynamic profile in pregnant women when compared to the non-pregnant population. Cardiac Drugs in Pregnancy presents up-to-date research for the treatment of cardiovascular disease during pregnancy, and discusses the most important indications of drug usage in pregnancy and postpartum. The book aims to assess the potential risk of drugs and their possible benefit against each other, making it an essential read for a wide range of health professionals involved in cardiac drug therapy in pregnancy.
