1. Record Nr. UNINA9910300125003321

Autore	Zakeri Saeed
Titolo	Rotation Sets and Complex Dynamics / / by Saeed Zakeri
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-78810-8
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (XIV, 124 p. 34 illus., 32 illus. in color.)
Collana	Lecture Notes in Mathematics, , 0075-8434 ; ; 2214
Disciplina	511.322
Soggetti	Dynamics Ergodic theory Functions of complex variables Dynamical Systems and Ergodic Theory Functions of a Complex Variable
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	1. Monotone Maps of the Circle -- 2. Rotation Sets -- 3. The Deployment Theorem -- 4. Applications and Computations -- 5. Relation to Complex Dynamics.
Sommario/riassunto	This monograph examines rotation sets under the multiplication by d (mod 1) map and their relation to degree d polynomial maps of the complex plane. These sets are higher-degree analogs of the corresponding sets under the angle-doubling map of the circle, which played a key role in Douady and Hubbard's work on the quadratic family and the Mandelbrot set. Presenting the first systematic study of rotation sets, treating both rational and irrational cases in a unified fashion, the text includes several new results on their structure, their gap dynamics, maximal and minimal sets, rigidity, and continuous dependence on parameters. This abstract material is supplemented by concrete examples which explain how rotation sets arise in the dynamical plane of complex polynomial maps and how suitable parameter spaces of such polynomials provide a complete catalog of all such sets of a given degree. As a main illustration, the link between rotation sets of degree 3 and one-dimensional families of cubic polynomials with a persistent indifferent fixed point is outlined. The

monograph will benefit graduate students as well as researchers in the area of holomorphic dynamics and related fields.
