

1. Record Nr.	UNINA9910300142403321
Autore	Farley Daniel Scott
Titolo	Algebraic K-theory of Crystallographic Groups : The Three-Dimensional Splitting Case // by Daniel Scott Farley, Ivonne Johanna Ortiz
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
ISBN	3-319-08153-5
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (X, 148 p.)
Collana	Lecture Notes in Mathematics, , 0075-8434 ; ; 2113
Disciplina	512.55
Soggetti	K-theory Group theory Manifolds (Mathematics) Complex manifolds K-Theory Group Theory and Generalizations Manifolds and Cell Complexes (incl. Diff.Topology)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Bibliographic Level Mode of Issuance: Monograph
Sommario/riassunto	The Farrell-Jones isomorphism conjecture in algebraic K-theory offers a description of the algebraic K-theory of a group using a generalized homology theory. In cases where the conjecture is known to be a theorem, it gives a powerful method for computing the lower algebraic K-theory of a group. This book contains a computation of the lower algebraic K-theory of the split three-dimensional crystallographic groups, a geometrically important class of three-dimensional crystallographic group, representing a third of the total number. The book leads the reader through all aspects of the calculation. The first chapters describe the split crystallographic groups and their classifying spaces. Later chapters assemble the techniques that are needed to apply the isomorphism theorem. The result is a useful starting point for researchers who are interested in the computational side of the Farrell-Jones isomorphism conjecture, and a contribution to the growing literature in the field.
