Sommario/riassunto

Offering a novel approach to the study of ethnicity in the neoliberal market, Another Arabesque is the first full-length book in English to focus on the estimated seven million Arabs in Brazil. With insights gained from interviews and fieldwork, John Tofik Karam examines how Brazilians of Syrian-Lebanese descent have gained greater visibility and prominence as the country has embraced its globalizing economy, particularly its relations with Arab Gulf nations. At the same time, he recounts how Syrian-Lebanese descendents have increasingly self-identified as "Arabs." Karam demonst

## Sommario/riassunto

The purpose of this CIME summer school was to present current areas of research arising both in the theoretical and applied setting that involve fully nonlinear partial differential equations. The equations presented in the school stem from the fields of Conformal Mapping Theory, Differential Geometry, Optics, and Geometric Theory of Several Complex Variables. The school consisted of four courses: Extremal problems for quasiconformal mappings in space by Luca Capogna, Fully nonlinear equations in geometry by Pengfei Guan, Monge-Ampere type equations and geometric optics by Cristian E. Gutiérrez, and On the Levi Monge Ampere equation by Annamaria Montanari.
