Treating War-Related Moral Injury and Loss with Adaptive Disclosure: A Case Study -- Treatment of Conversion Disorder with PTSD -- Intimate Relationship Distress and Combat-Related PTSD.

Sommario/riassunto

This book takes a case-based approach to addressing the challenges psychiatrists and other clinicians face when working with American combat veterans after their return from a war zone. Written by experts, the book concentrates on a wide variety of concerns associated with posttraumatic stress disorder (PTSD), including different treatments of PTSD. The text also looks at PTSD comorbidities, such as depression and traumatic brain injury (TBI) and other conditions masquerading as PTSD. Finally, the authors touch on other subjects concerning returning veterans, including pain, disability, facing the end of a career, sleep problems, suicidal thoughts, violence, and mefloquine "toxicity". Each case study includes a case presentation, diagnosis and assessment, treatment and management, outcome and case resolution, and clinical pearls and pitfalls. Post-Traumatic Stress Disorder and Related Diseases in Combat Veterans is a valuable resource for civilian and military mental health practitioners, and primary care physicians on how to treat patients returning from active war zones.
