It provides both an assessment of challenging cases that appear to be complex in terms of determining the true severity of aortic stenosis as well as a review of current available treatment options, such as valvuloplasty, transcatheter, and surgical valve replacement techniques. Written by an international team of renowned cardiologists, surgeons and scientists, Aortic Stenosis: Case-Based Diagnosis and Therapy is essential for individuals in the structural heart disease field, including cardiac

surgeons, interventional and imaging cardiologists, and cardiology fellows. · Represents an essential companion to assist cardiologists in diagnosing patients with aortic stenosis and providing novel therapies · Presents case by case examples of different patients with a wide variety of aortic stenoses · Provides cutting edge and state of the art multimodality imaging, interventional, and surgical techniques · Describes the effective multidisciplinary approach to diagnostically challenging cases as well as risk stratification and therapeutic options.
