Sommario/riassunto	This book is a quick reference guide to the new, more personalized approaches to the management of skin disorders that have emerged as a result of progress in our understanding of the genetic background and pathophysiology of skin diseases and the diversity of mechanisms underlying their clinical heterogeneity. A wide range of personalized and targeted therapies are described, including those for different skin cancers, chronic inflammatory skin diseases, and autoimmune diseases. In addition, readers will find that the book documents how research results in personalized medicine can be effectively transferred to dermatological practice and looks forward to future treatments that might be developed on the basis of recent research findings. The authors are all recognized experts in the field, and the text is

presented in a reader-friendly format and well illustrated.
