Sommario/riassunto	These guidelines, compiled by a panel of clinicians and scientists with a high level of expertise, aim to provide readers with the most up-to-date and comprehensive instructions on the treatment and prevention of ocular inflammation. All of the recommendations are explicitly linked to supporting evidence and graded according to the strength of that evidence, and the editors have made every effort to ensure that chapters are of a consistently high methodological quality. The guidelines for each treatment include dose and the frequency and mode of delivery. Significant side-effects of treatment are identified and distinguished from those of the disease in question. Suggestions are presented for the prevention both of the disease itself and of the treatment-related complications. In addition, likely future directions in treatment and prevention are identified. These guidelines will be of great practical value for all clinicians and clinical scientists with an interest in the subject.
