

1. Record Nr.	UNINA9910300359603321
Autore	Mazziotti Silvio
Titolo	MR Enterography / / by Silvio Mazziotti, Alfredo Blandino
Pubbl/distr/stampa	Milano : , : Springer Milan : , : Imprint : Springer, , 2014
ISBN	88-470-5675-6
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (159 p.)
Disciplina	616.3407548
Soggetti	Radiology Gastroenterology Pediatrics Proctology Abdomen - Surgery Imaging / Radiology Diagnostic Radiology Abdominal Surgery
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters.
Nota di contenuto	Introduction -- Technique -- Normal Anatomy -- MR Findings In Chron's Disease -- Extraintestinal Complications -- Perianal Complications -- Other Indications For MRE.
Sommario/riassunto	<p>In recent years, there has been huge interest in developing new methods that offer improved accuracy for the detection of small bowel pathology, and in particular for the assessment of inflammatory bowel diseases (IBD). Cross-sectional imaging, such as CT and MR, has advantages over traditional barium fluoroscopic techniques in terms of direct visualization of the bowel wall and improved visualization of extraluminal findings and complications. This means a complete change in the diagnostic approach to the patient with IBD: from analysis of the bowel surface to direct evaluation of parietal alterations and assessment of peri- and extraintestinal involvement. The ideal imaging test is reproducible, well tolerated by patients and, above all, free of ionizing radiation. MR enterography, currently performed only in a few reference centers, meets these criteria and offers accurate</p>

diagnosis, particularly in respect of the wide spectrum of intra- and extraintestinal complications of IBD. This book provides a thorough overview of the indications, techniques, diagnostic advantages, and limitations of MR enterography. Particular attention is paid to patient preparation in relation to the particular study type and to the potential advantages of the most up-to-date MR studies in specific cases, e.g., allergy or renal failure. A separate chapter is devoted to MR of perianal region for the detection and staging of perianal fistula, a common complication in patients with Crohn's disease. Numerous high-quality illustrations are included and help to ensure that the book will be a valuable source of information for every radiologist involved in abdominal MR imaging.
