

1. Record Nr.	UNINA9910300372103321
Autore	Angerami Aaron
Titolo	Jet Quenching in Relativistic Heavy Ion Collisions at the LHC // by Aaron Angerami
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2014
ISBN	3-319-01219-3
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (180 p.)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	530.1
Soggetti	Nuclear physics Heavy ions Mathematical physics Particle acceleration Physical measurements Measurement Nuclear Physics, Heavy Ions, Hadrons Theoretical, Mathematical and Computational Physics Particle Acceleration and Detection, Beam Physics Measurement Science and Instrumentation
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Background -- Experimental Setup -- Jet Reconstruction -- Data Analysis -- Results -- Conclusion.
Sommario/riassunto	This thesis presents the first measurements of jets in relativistic heavy ion collisions as reported by the ATLAS Collaboration. These include the first direct observation of jet quenching through the observation of a centrality-dependent dijet asymmetry. Also, a series of jet suppression measurements are presented, which provide quantitative constraints on theoretical models of jet quenching. These results follow a detailed introduction to heavy ion physics with emphasis on the phenomenon of jet quenching and a comprehensive description of the ATLAS detector and its capabilities with regard to performing these measurements.
