Sommario/riassunto

How do couples build intimacy in an era that valorizes independence and self-responsibility? How can a man be a good husband when full-time jobs are scarce? How can unmarried women find fulfillment and recognition outside of normative relationships? How can a person express their sexuality when there is no terminology that feels right? In contemporary Japan, broad social transformations are reflected and refracted in changing intimate relationships. As the Japanese population ages, the low birth rate shrinks the population, and decades of recession radically restructure labor markets, Japanese intimate relationships, norms, and ideals are concurrently shifting. This volume explores a broad range of intimate practices in Japan in the first decades of the 2000s to trace how social change is becoming manifest through deeply personal choices. From young people making decisions about birth control to spouses struggling to connect with each other, parents worrying about stigma faced by their adopted children, and queer people creating new terms to express their identifications, Japanese intimacies are commanding a surprising amount of attention, both within and beyond Japan. With ethnographic analysis focused on how intimacy is imagined, enacted, and discussed, the volume's chapters offer rich and complex portraits of how people balance personal desires with feasible possibilities and shifting social norms. *Intimate Japan* will appeal to scholars and students in anthropology and Japanese or Asian studies, particularly those focusing on gender, kinship, sexuality, and labor policy. The book will also be of interest to researchers across social science subject areas, including sociology, political science, and psychology.

Sommario/riassunto	Networks of Echoes: Imitation, Innovation and Invisible Leaders is a mathematically rigorous and data rich book on a fascinating area of the science and engineering of social webs. There are hundreds of complex network phenomena whose statistical properties are described by inverse power laws. The phenomena of interest are not arcane events that we encounter only fleetingly, but are events that dominate

our lives. We examine how this intermittent statistical behavior intertwines itself with what appears to be the organized activity of social groups. The book is structured as answers to a sequence of questions such as: How are decisions reached in elections and boardrooms? How is the stability of a society undermined by zealots and committed minorities, and how is that stability re-established? Can we learn to answer such questions about human behavior by studying the way flocks of birds retain their formation when eluding a predator? These questions and others are answered using a generic model of a complex dynamic network—one whose global behavior is determined by a symmetric interaction among individuals based on social imitation. The complexity of the network is manifest in time series resulting from self-organized critical dynamics that have divergent first and second moments, are non-stationary, non-ergodic, and non-Poisson. How phase transitions in the network dynamics influence such activity as decision making is a fascinating story and provides a context for introducing many of the mathematical ideas necessary for understanding complex networks in general. The decision making model (DMM) is selected to emphasize that there are features of complex webs that supersede specific mechanisms and need to be understood from a general perspective. This insightful overview of recent tools and their uses may serve as an introduction and curriculum guide in related courses.
