

1. Record Nr.	UNINA9910300394103321
Autore	Mullaney James
Titolo	A Buyer's and User's Guide to Astronomical Telescopes and Binoculars / / by James Mullaney
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2014
ISBN	1-4614-8733-1
Edizione	[2nd ed. 2014.]
Descrizione fisica	1 online resource (232 p.)
Collana	The Patrick Moore Practical Astronomy Series, , 1431-9756
Disciplina	522.2
Soggetti	Astronomy Astronomy—Observations Astronomy, Observations and Techniques Popular Science in Astronomy
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di contenuto	Part I Buying Astronomical Telescopes & Binoculars -- Introduction -- Binoculars -- Telescope Basics -- Refracting Telescopes -- Reflecting Telescopes -- Catadioptric Telescopes -- Accessories -- Astroimaging -- Binocular Sources -- Telescope Sources -- Part II Using Astronomical Telescopes and Binoculars -- Observing the Techniques -- Observing Programs -- Conclusion -- Pro-Am Collaboration.
Sommario/riassunto	Amateur astronomers of all skill levels are always contemplating their next telescope, and this book points the way to the most suitable instruments. Similarly, those who are buying their first telescopes – and these days not necessarily a low-cost one – will be able to compare and contrast different types and manufacturers. This revised new guide provides an extensive overview of binoculars and telescopes. It includes detailed up-to-date information on sources, selection and use of virtually every major type, brand, and model on today's market, a truly invaluable treasure-trove of information and helpful advice for all amateur astronomers. Originally written in 2006, much of the first edition is inevitably now out of date, as equipment advances and manufacturers come and go. This second edition not only updates all the existing sections but adds two new ones: Astro-imaging and Professional-Amateur collaboration. Thanks to the rapid and amazing

developments that have been made in digital cameras it is easily possible to image all sorts of astronomical objects and fields. Selecting the right device for a variety of purposes can be an overwhelming task in a market crowded with observing options, but this comprehensive guide clarifies the process. Anyone planning to purchase binoculars or telescopes for astronomy – whether as a first instrument or as an upgrade to the next level – will find this book a treasure-trove of information and advice. It also supplies the reader with many useful hints and tips on using astronomical telescopes or binoculars to get the best possible results.
