1. Record Nr. UNISALENTO991002832659707536

Autore	Garlan, Yvon
Titolo	Guerre et économie en Grèce ancienne / Yvon Garlan
Pubbl/distr/stampa	Paris : Découverte, 1989
ISBN	2707118117
Descrizione fisica	225 p. ; 22 cm
Collana	Textes a l'appui. Histoire classique
Disciplina	936
Soggetti	Guerra - Grecia antica
Lingua di pubblicazione	Francese
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr. UNINA9910300469303321

Autore	Lopez Cesar
Titolo	MATLAB Control Systems Engineering / / by Cesar Lopez
Pubbl/distr/stampa	Berkeley, CA : , : Apress : , : Imprint : Apress, , 2014
ISBN	9781523150298 1523150297 9781484202890 1484202899
Edizione	[1st ed. 2014.]
Descrizione fisica	1 online resource (xi, 163 pages)
Collana	MATLAB Solutions Series
Disciplina	519.4028553042
Soggetti	Programming languages (Electronic computers) Computer software Programming Languages, Compilers, Interpreters Mathematical Software
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	"Practical hands-on MATLAB solutions"--Cover.

Sommario/riassunto

MATLAB is a high-level language and environment for numerical computation, visualization, and programming. Using MATLAB, you can analyze data, develop algorithms, and create models and applications. The language, tools, and built-in math functions enable you to explore multiple approaches and reach a solution faster than with spreadsheets or traditional programming languages, such as C/C++ or Java. MATLAB Control Systems Engineering introduces you to the MATLAB language with practical hands-on instructions and results, allowing you to quickly achieve your goals. In addition to giving an introduction to the MATLAB environment and MATLAB programming, this book provides all the material needed to design and analyze control systems using MATLAB's specialized Control Systems Toolbox. The Control Systems Toolbox offers an extensive range of tools for classical and modern control design. Using these tools you can create models of linear time-invariant systems in transfer function, zero-pole-gain or state space format. You can manipulate both discrete-time and continuous-time systems and convert between various representations. You can calculate and graph time response, frequency response and loci of roots. Other functions allow you to perform pole placement, optimal control and estimates. The Control System Toolbox is open and extendible, allowing you to create customized M-files to suit your specific applications.
