

1. Record Nr.	UNINA9910300530203321
Autore	Walschaers Mattia
Titolo	Statistical Benchmarks for Quantum Transport in Complex Systems : From Characterisation to Design // by Mattia Walschaers
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-93151-2
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (457 pages)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	530.12
Soggetti	Quantum theory Statistical physics Dynamics Quantum Physics Statistical Physics and Dynamical Systems Complex Systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Part I: General Introduction -- Perspective -- Essential Quantum Theory -- Complex Quantum Systems and Random Matrix Theory -- Part II: Single-particle Quantum Transport -- Efficient Transport in Closed Systems -- Scattering Approach to Efficient Transport -- Part III: Many-particle Quantum Transport -- Describing Many-particle Quantum Systems -- Many-Particle Interference -- Currents of Indistinguishable Particles -- Part IV: General Conclusions and Prospects -- Conclusions.
Sommario/riassunto	This book introduces a variety of statistical tools for characterising and designing the dynamical features of complex quantum systems. These tools are applied in the contexts of energy transfer in photosynthesis, and boson sampling. In dynamical quantum systems, complexity typically manifests itself via the interference of a rapidly growing number of paths that connect the initial and final states. The book presents the language of graphs and networks, providing a useful framework to discuss such scenarios and explore the rich

phenomenology of transport phenomena. As the complexity increases, deterministic approaches rapidly become intractable, which leaves statistics as a viable alternative.
