

1. Record Nr.	UNINA9910300549903321
Titolo	Processing of Polymer-based Nanocomposites : Introduction // edited by Suprakas Sinha Ray
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2018
ISBN	3-319-97779-2
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (167 pages)
Collana	Springer Series in Materials Science, , 0933-033X ; ; 277
Disciplina	620.118
Soggetti	Nanoscale science Nanoscience Nanostructures Polymers Nanotechnology Nanoscale Science and Technology Polymer Sciences Nanotechnology and Microengineering
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction, Vincent Ojijo and Suprakas Sinha Ray -- Synthesis and functionalization of nanomaterials, Neeraj Kumar and Suprakas Sinha Ray -- Nanoclay and nanoclay-containing polymer nanocomposites, Suprakas Sinha Ray and Vincent Ojijo -- Polymer nanocomposites structural and morphological elucidation techniques, Jayita Bandyopadhyay and Suprakas Sinha Ray -- Polymer nanocomposites processing technologies, Suprakas Sinha Ray and Vincent Ojijo -- Impact of melt-processing strategy on structural and mechanical properties: Clay-containing polypropylene nanocomposites, Dimakatso Morajane, Jayita Bandyopadhyay, Vincent Ojijo and Suprakas Sinha Ray.
Sommario/riassunto	Processing of polymer nanocomposites usually requires special attention since the resultant structure—micro- and nano-level, is directly influenced by among other factors, polymer/nano-additive chemistry and the processing strategy. This book consolidates knowledge, from fundamental to product development, on polymer

nanocomposites processing with special emphasis on the processing-structure-property-performance relationships in a wide range of polymer nanocomposites. Furthermore, this book focuses on emerging processing technologies such as electrospinning, which has very exciting applications ranging from medical to filtration. Additionally, the important role played by the nanoparticles in polymer blends structures has been illustrated in the current book, with special focus on fundamental aspects and properties of nanoparticles migration and interface crossing in immiscible polymer blend nanocomposites. This book introduces readers to nanomaterials and polymer nanocomposites processing. After defining nanoparticles and polymer nanocomposites and discussing environmental aspects, the second chapter focuses on the synthesis and functionalization of nanomaterials with applications in polymers. A brief overview on nanoclay and nanoclay-containing polymer nanocomposites is provided in third chapter. The fourth chapter provides an overview of the polymer nanocomposites structural elucidation techniques, such as X-ray diffraction and scattering, microscopy and spectroscopy, rheology. The fifth chapter is dedicated to the polymer nanocomposites processing technologies, among which electrospinning, which has very exciting applications ranging from medical to filtration. The last chapter provides an overview on how melt-processing strategy impact structure and mechanical properties of polymer nanocomposites by taking polypropylene-clay nanocomposite as a model system. The book is useful to undergraduate and postgraduate students (polymer engineering, materials science & engineering, chemical & process engineering), as well as research & development personnel, engineers, and material scientists.
