Sommario/riassunto

This book discusses egalitarianism in Scandinavian countries through historically oriented and empirically based studies on social and political change. The chapters engage with issues related to social class, political conflict, the emergence of the welfare state, public policy, and conceptualizations of equality. Throughout, the contributors discuss and sometimes challenge existing notions of the social and cultural complexity of Scandinavia. For example, how does egalitarianism in these nations differ from other contemporary manifestations of egalitarianism? Is it meaningful to continue to nurture the idea of Scandinavian exceptionalism in an age of economic crises and globalization? The book also proposes that egalitarianism is not merely a relationship between specific, influential enlightenment ideas and patterns of policy, but an aspect of social organization characterized by specific forms of political tension, mobilization, and conflict resolution-as well as emerging cultural values such as individual autonomy.

Sommario/riassunto	Fluidos, hemodinamica y hematologia es una obra didactica y formativa en la que se hace un examen riguroso de los conceptos, se refuerzan

los conocimientos y se facilita el análisis de la evidencia obtenida en los resultados de pruebas de laboratorio clínico. Además, se describen técnicamente los elementos formes y no formes de la sangre y se incluyen estudios de caso. La obra, que va de lo general a lo particular, presenta tablas e ilustraciones a color que permiten mantener el hilo conductor para abordar los casos clínicos prácticos en caninos y felinos. La información que aporta el texto facilita el aprendizaje transversal a partir de la morfofisiología, la patología clínica, la medicina y la práctica clínica en pequeños animales. El texto produce una mediación pedagógica no personalizada, aun así, valiosa que permite avanzar a ritmo propio bajo la premisa de la lectura, la apropiación y la reflexión de sus elementos.
