

1. Record Nr.	UNINA9910300579203321
Autore	Beatley Timothy
Titolo	Blue Biophilic Cities : Nature and Resilience Along The Urban Coast // by Timothy Beatley
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Palgrave Macmillan, , 2018
ISBN	9783319679556 3319679554
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (XIII, 142 p. 40 illus. in color.)
Collana	Cities and the Global Politics of the Environment, , 2946-3467
Disciplina	307.1216
Soggetti	Ecology Physical geography Sociology, Urban Environmental Sciences Physical Geography Earth System Sciences Urban Sociology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	1. Future Cities: The Blue and Biophilic -- 2. Planning the Balance of Danger and Delight -- 3. Unsustainable Bounties for the Blue: Cities to the Rescue? -- 4. Making the Marine World Visible - Fostering Emotional Connections to the Sea -- 5. Reimagining the Blue Edge -- 6. Just Blue (and Biophilic) Cities -- 7. Conclusions and Trajectories: Final Reflection on Blue, Biophilic Urbanism.
Sommario/riassunto	There is a growing recognition of the contact we need with nature to be happy, healthy and to lead meaningful lives. We need that nature daily, if not hourly, and so it must be nearby to where we live and work. This is central to the concept of 'biophilic cities' which is emerging as a global movement and guiding framework for city design and planning. Blue Biophilic Cities is about the promise of this movement and a kind of biophilic urbanism that is possible for cities perched on the edge of harbours and seas. In blue biophilic cities, much of the nearby nature is to be found in the marine realm. This book explores the efforts

underway in a number of cities to foster new marine connections through a variety of innovative programs and initiatives. It also discusses a number of design ideas, from dynamic shoreline edges and floodable parks to living breakwaters, in order to emphasise the possibility of designing for resilience while also supporting marine biodiversity and strengthening biophilic connections to the marine world. .
