Sommario/riassunto	Fundamentals of Oral Histology and Physiology is a landmark new text streamlining the essentials of histology and physiology into one clinically accessible textbook. Written for predoctoral dental students, the book brings together structure, function, and clinical correlations for maximum retention and ease of use. Assuming a background in basic biologic sciences, this text focuses on the histology and physiology that students need to know to practice dentistry and to

understand and evaluate the current literature, without repeating basic information learned in other courses.

Sommario/riassunto	This book highlights different aspects of the problem of elder abuse and neglect in India, and discusses its forms as well as means of prevention, intervention and management. It presents a framework for understanding the occurrence of elder abuse and neglect in India, placing the discussion within the global context. Elder abuse and neglect is a growing concern in South Asia, and this is the first

comprehensive account of the topic from India. It uses data from different parts of India to describe the various dimensions of elder abuse and neglect among different population categories and sections in society. Covering rural and urban areas in different states, it discusses current perspectives on elder abuse and neglect at the household level, widows, HIV-affected populations, and those residing in institutions. This book comprises views from experts in the field and is of interest to researchers and academics from the social and behavioural sciences, policy makers, and NGOs.
