

1. Record Nr.	UNINA9910300597903321
Autore	Newnham Elizabeth
Titolo	Towards the Humanisation of Birth : A study of epidural analgesia and hospital birth culture // by Elizabeth Newnham, Lois McKellar, Jan Pincombe
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Palgrave Macmillan, , 2018
ISBN	3-319-69962-8
Edizione	[1st ed. 2018.]
Descrizione fisica	1 online resource (266 pages) : illustrations
Classificazione	61.68
Disciplina	306.461
Soggetti	Social medicine Medical anthropology Maternal and child health services Ethnography Women Medical Sociology Medical Anthropology Maternal and Child Health Women's Studies
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	1. Introduction -- 2. The Epidural in Context -- 3. The Politics of Birth -- 4. Institutional Culture: Discipline and Resistance -- 5. A Dialectic of Risk -- 6. A Circle of Trust -- 7. Closing the Circle.
Sommario/riassunto	This book examines the future of birthing practices, particularly by focusing on epidural analgesia in childbirth. It describes historical and cultural trajectories that have shaped the way in which birth is understood in Western, developed nations. In setting out the nature of epidural history, knowledge and practice, the book delves into related birth practices within the hospital setting. By critically examining these practices, which are embedded in a scientific discourse that rationalises and relies upon technology use, the authors argue that epidural analgesia has been positioned as a safe technology in contemporary

maternity culture, despite it carrying particular risks. In examining alternative research the book proposes that increasing epidural rates are not only due to greater pain relief requirements or access but are influenced by technocratic values and a fragmented maternity system. The authors outline the way in which this epidural discourse influences how information is presented to women and how this affects their choices around the use of pain relief in labour.
