

1. Record Nr.	UNINA9910304133603321
Titolo	The Neuropsychology of Men : A Developmental Perspective from Theory to Evidence-based Practice // edited by Charles M. Zaroff, Rik Carl D'Amato
Pubbl/distr/stampa	New York, NY : , : Springer US : , : Imprint : Springer, , 2015
ISBN	1-4899-7615-9
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (245 p.)
Collana	Issues of Diversity in Clinical Neuropsychology, , 1930-4633
Disciplina	616.8
Soggetti	Neuropsychology Neurology Sex (Psychology) Gender expression Cross-cultural psychology Neurology Gender Studies Cross Cultural Psychology
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Introduction to The Neuropsychology of Men: A Developmental Perspective from Theory to Evidence-based Practice -- Imaging and Development: Relevant Findings in Males -- Understanding the Neuropsychology of Autism Spectrum Disorders in Men -- Using an Ecological Clinical Neuropsychology Approach to Understanding and Intervening with Men with Learning Disorders and Attention Deficit/Hyperactivity Disorders -- Understanding Disorders of Defiance, Aggression, and Violence: Oppositional Defiant Disorder, Conduct Disorder, and Antisocial Personality Disorder in Males -- Understanding the Neuropsychology of Substance Abuse in Men -- The Neuropsychology of Men with Epilepsy -- Serving Men with Traumatic Brain Injuries -- Men at Risk: Special Education and Incarceration -- The Neuropsychological Basis of Emotion and Social Cognition in Men.
Sommario/riassunto	This timely text examines normative and pathological brain/behavior

connections across the male lifespan, and how these findings can best inform research, intervention, and prevention. It spotlights possible etiologies for male-dominated pathology, including academic deficits and disorders relating to violence, as well as identifying men's psychological resilience and vulnerabilities throughout life. Clinical and social issues are intricately linked here, particularly in areas such as substance abuse, emotion processing, and sequelae of brain trauma. In these ways, the text moves on from the simplistic view of males as the standard in psychological studies while respecting complicated questions about biology and environment that have yet to be resolved. Since the inception of psychology, much research has focused specifically on men but few studies have offered distinctive interventions developed to help this unique male population. This volume fills the chasm left from many seminal studies. Among the featured topics:

- Imaging and development: relevant findings in males.
- Understanding the neuropsychology of autism spectrum disorders in men.
- Understanding disorders of defiance, aggression, and violence in males.
- Serving men with traumatic brain injuries.
- Men at risk: special education and incarceration.
- The neuropsychological basis of emotion and social cognition in men.

The Neuropsychology of Men offers neuropsychologists, clinical psychologists, and rehabilitation specialists an evidence-based framework for understanding male-specific cognitive and behavioral trends in the normative population, and for identifying and addressing challenges in boys and men outside the norm.
