

1. Record Nr.	UNINA9910304136903321
Titolo	Bases of Adult Attachment [[electronic resource]] : Linking Brain, Mind and Behavior // edited by Vivian Zayas, Cindy Hazan
Pubbl/distr/stampa	New York, NY : , : Springer New York : , : Imprint : Springer, , 2015
ISBN	1-4614-9622-5
Edizione	[1st ed. 2015.]
Descrizione fisica	1 online resource (202 p.)
Classificazione	77.57
Disciplina	150 155 155.2 302
Soggetti	Developmental psychology Personality Social psychology Psychotherapy Counseling Developmental Psychology Personality and Social Psychology Psychotherapy and Counseling
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references at the end of each chapters and index.
Nota di contenuto	Part I: Introduction: Introduction and overview -- Part II: The processes that promote adult attachment formation: The distress-relief dynamic in attachment bonding -- An expectancy-value approach to attachment -- Part III: The effect of previous experience on adult attachment formation and maintenance -- Attachment and relationships across time: An organizational-developmental perspective -- The biobehavioral legacy of early attachment relationships for adult emotional and interpersonal functioning -- How early experiences shape attraction, partner preferences and attachment dynamics -- Part IV: Development and change in adult attachment bonds: Insights into the formation of attachment bonds from a social network perspective -- From an unknown other to an attachment figure: How do mental

representations change as attachments form? -- Evidence from fMRI studies of adult pair-bonding. .

Sommario/riassunto

A great deal is known about how infants form attachments, and how these processes carry over into adolescence. But after that, the trail grows cold: the study of adult attachment emphasizes individual variations, paying little attention to the normative mechanisms of adult bonding. A much-needed corrective, *Bases of Adult Attachment* examines this under-investigated topic with an eye toward creating a robust theoretical model. The first volume of its kind, its multilevel approach integrates current findings from neuroscience and psychology to analyze the processes by which adult relationships develop, mature, function, and dissolve. Here in relevant detail are factors contributing to initial attraction, possible scenarios in the evolution from friendship to attachment, and the changes that occur on both sides of a relationship as partners mutually influence each other's behavior, emotions, cognition, and even physiology. And expert contributors address long-neglected questions in the field with stimulating topics such as: The distress-relief dynamic in attachment bonding. An expectancy-value approach to attachment. The biobehavioral legacy of early attachment relationships for adult emotional and interpersonal functioning. How early experiences shape attraction, partner preferences, and attachment dynamics. How mental representations change as attachments form. Insights into the formation of attachment bonds from a social network perspective. *Bases of Adult Attachment* will interest scholars approaching adult attachment at multiple levels of analysis (neural, physiological, affective, cognitive, and behavioral) and from multiple perspectives. This wide audience includes developmental, social, and cognitive psychologists as well as neuroscientists, neuropsychologists, clinicians, sociologists, family researchers, and professionals in public health and medicine.
