Sommario/riassunto	Tranquillisers are prescribed to almost twice as many women as men, yet very little gender-based research has been carried out on the social context of their use. Gendered Moods offers the first feminist analysis of the gendered character of psychotropic drug use, based on studies of long-term psychotropic drug users and the content of drug advertising. The authors argue that gender differences in psychotropic drug use are manifestations of the gendered construction of society as a whole, and that, as a result, women are particularly susceptible to being channelled into a state of
