   Sommario/riassunto This excellent book represents the second part of three-volumes
                      regarding MATLAB- based applications in almost every branch of
                      science. The present textbook contains a collection of 13 exceptional
                      articles. In particular, the book consists of three sections, the first one
                      is devoted to electronic engineering and computer science, the second
                      is devoted to MATLAB/SIMULINK as a tool for engineering applications,
                      the third one is about Telecommunication and communication systems
                      and the last one discusses MATLAB toolboxes.
