

1. Record Nr.	UNINA9910318458603321
Autore	Delle Donne, Fulvio
Titolo	In presenza dell'autore : l'autorappresentazione come evoluzione della storiografia professionale tra basso Medioevo e Umanesimo / a cura di Fulvio Delle Donne
Pubbl/distr/stampa	Napoli : FedOA, Federico II University Press, 2018
ISBN	9788868870478
Descrizione fisica	169 : ill. ; 21 cm
Collana	Testi. Antichità, Medioevo e Umanesimo ; 1
Disciplina	907.2
Locazione	FLFBC
Collocazione	P2B 680 DELLE DONNE F 2018/II
Lingua di pubblicazione	Italiano
Formato	Materiale a stampa
Livello bibliografico	Monografia

2. Record Nr.	UNINA9910863105403321
Autore	Nagao Kazuma
Titolo	Fluctuations and Non-Equilibrium Phenomena in Strongly-Correlated Ultracold Atoms // by Kazuma Nagao
Pubbl/distr/stampa	Springer Singapore, 2020 Singapore : , : Springer Singapore : , : Imprint : Springer, , 2020
ISBN	981-15-7171-6
Edizione	[1st ed. 2020.]
Descrizione fisica	1 online resource (126 pages)
Collana	Springer Theses, Recognizing Outstanding Ph.D. Research, , 2190-5053
Disciplina	530.43078
Soggetti	Phase transformations (Statistical physics) Condensed matter Superconductivity Superconductors Statistical physics Quantum Gases and Condensates Strongly Correlated Systems, Superconductivity Phase Transitions and Multiphase Systems Statistical Physics and Dynamical Systems
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Ultracold Bose Gases in Optical Lattices -- Phase Space Methods for Quantum Dynamics -- Response of the Higgs Mode in a Three Dimensional Optical Lattice -- Semiclassical Quench Dynamics of Bose Gases in Optical Lattices -- Conclusions and Outlooks -- Appendix.
Sommario/riassunto	This book discusses non-equilibrium quantum many-body dynamics, recently explored in an analog quantum simulator of strongly correlated ultracold atoms. The first part presents a field-theoretical analysis of the experimental observability of the Higgs amplitude mode that emerges as a relativistic collective excitation near a quantum phase transition of superfluid Bose gases in an optical lattice potential. The author presents the dynamical susceptibilities to external driving of the microscopic parameters, taking into account a leading-order

perturbative correction from quantum and thermal fluctuations and shows clear signatures of the Higgs mode in these observables. This is the first result that strongly supports the stability of the Higgs mode in three-dimensional optical lattices even in the presence of a spatially inhomogeneous confinement potential and paves the way for desktop observations of the Higgs mode. In the second part, the author applies the semi-classical truncated-Wigner approximation (TWA) to far-from-equilibrium quantum dynamics. Specifically, he considers the recent experiments on quantum-quench dynamics in a Bose-Hubbard quantum simulator. A direct comparison shows remarkable agreement between the numerical results from TWA and the experimental data. This result clearly indicates the potential of such a semi-classical approach in reliably simulating many-body systems using classical computers. The book also includes several chapters providing comprehensive reviews of the recent studies on cold-atomic quantum simulation and various theoretical methods, including the Schwinger-boson approach in strongly correlated systems and the phase-space semi-classical method for far-from-equilibrium quantum dynamics. These chapters are highly recommended to students and young researchers who are interested in semi-classical approaches in non-equilibrium quantum dynamics.
