Sommario/riassunto

This volume contains thoroughly refereed and revised full papers selected from the presentations at the first workshop held under the auspices of the ESPRIT Basic Research Action 6453 Types for Proofs and Programs in Nijmegen, The Netherlands, in May 1993. As the whole ESPRIT BRA 6453, this volume is devoted to the theoretical foundations, design and applications of systems for theory development. Such systems help in designing mathematical axiomatisation, performing computer-aided logical reasoning, and managing databases of mathematical facts; they are also known as proof assistants or proof checkers.

Sommario/riassunto

Martin Heidegger's 1925-26 lectures on truth and time provided much of the basis for his momentous work, *Being and Time*. Not published until 1976 as volume 21 of the *Complete Works*, three months before Heidegger's death, this work is central to Heidegger's overall project of reinterpreting Western thought in terms of time and truth. The text shows the degree to which Aristotle underlies Heidegger's hermeneutical theory of meaning. It also contains Heidegger's first published critique of Husserl and takes major steps toward establishing the temporal bases of logic and truth. Thomas Sheehan's
