Sommario/riassunto	This book provides a comprehensive overview of contemporary evidence-based management of urothelial carcinoma. The first part of the book is devoted to urothelial carcinoma of the bladder and includes detailed description of the diagnosis and treatment of non-muscle-invasive, muscle-invasive, and advanced or metastatic disease. Attention then turns to upper tract urothelial carcinoma (UTUC), with individual chapters on diagnosis, nephron-sparing surgery, nephroureterectomy, and treatment of advanced or metastatic UTUC. The text is supported by many illustrations, photos, and tables that clarify management, and surgical video clips are also available to readers. The book will be a welcome addition to the literature as progress continues to be made in understanding the exact pathophysiology of urothelial carcinoma and in developing more effective diagnostic and therapeutic modalities. It will be useful both to

researchers in the field of urothelial carcinoma and to clinicians,
including especially residents and fellows.
