

1. Record Nr.	UNINA9910337602503321
Autore	Öchsner Andreas
Titolo	Finite Elements for Truss and Frame Structures : An Introduction Based on the Computer Algebra System Maxima // by Andreas Öchsner, Resam Makvandi
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-319-94941-1
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (XIV, 119 p. 33 illus., 4 illus. in color.)
Collana	SpringerBriefs in Computational Mechanics, , 2191-5342
Disciplina	620.1
Soggetti	Mechanics Mechanics, Applied Solid Mechanics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Introduction -- Maxima - A Computer Algebra System -- Rods and Trusses -- Euler-Bernoulli Beams and Frames -- Timoshenko Beams and Frames -- Maxima Source Codes.
Sommario/riassunto	This book is intended as an essential study aid for the finite element method. Based on the free computer algebra system Maxima, the authors offer routines for symbolically or numerically solving problems in the context of plane truss and frame structures, allowing readers to check classical 'hand calculations' on the one hand and to understand the computer implementation of the method on the other. The mechanical theories focus on the classical one-dimensional structural elements, i.e. bars, Euler–Bernoulli and Timoshenko beams, and their combination to generalized beam elements. Focusing on one-dimensional elements reduces the complexity of the mathematical framework, and the resulting matrix equations can be displayed with all components and not merely in the form of a symbolic representation. In addition, the use of a computer algebra system and the incorporated functions, e.g. for equation solving, allows readers to focus more on the methodology of the finite element method and not on standard procedures. .
