1. Record Nr. UNINA9910337612303321

Autore	Mikhasev Gennadi I
Titolo	Thin-walled Laminated Structures : Buckling, Vibrations and Their Suppression / / by Gennadi I. Mikhasev, Holm Altenbach
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-030-12761-3
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (290 pages)
Collana	Advanced Structured Materials, , 1869-8441 ; ; 106
Disciplina	624.177
Soggetti	Mechanics, Applied Solids Materials - Analysis Mathematics - Data processing Building materials Solid Mechanics Characterization and Analytical Technique Computational Science and Engineering Structural Materials
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di bibliografia	Includes bibliographical references and index.
Nota di contenuto	Two-Dimensional Theory of Composite Laminated Shells like “Sandwich” -- Buckling of Laminated Shells -- Free Vibrations of Viscoelastic Shells with Constant Physical Parameters -- Free and Forced Vibrations of Thin-Walled Laminated Structures with Adaptive Physical Properties -- Soft Suppression of Running Localized Vibrations in Laminated Magnetorheological Cylindrical Shells by Using Time-Dependent Magnetic Field.
Sommario/riassunto	This book presents a theoretical approach that allows the analysis of structures with magnetorheological and electrorheological layers, and shows, with the help of examples, how the mechanical behaviour of thin-walled laminated structures can be influenced. It consists of six chapters: Chapter 1 presents a brief overview of derivation approaches for theories of thin-walled structures, modelling of composites and modelling of laminated and sandwich structures. Chapter 2 describes

the equivalent single layer model for thin laminated cylindrical shells, including the special cases of plates and beams. In addition to the classical mechanical properties, it also considers the electrorheological and magnetorheological properties. Chapter 3 presents the elastic buckling of laminated beams, plates, and cylindrical shells, discussing various problems, such as the influence of the boundary conditions, external loading and magnetic fields. It also suggests different approximations for asymptotic methods. Chapter 4 focuses on the free vibrations of elastic laminated beams, plates and cylindrical shells, investigating the influence of the boundary conditions and other factors. Chapter 5 presents the latest results concerning vibration of laminated structures composed of smart materials and discusses in detail the influence of electric and magnetic fields on smart structures. These results provide insights into the optimal design of these structures. Lastly, Chapter 6 features a short appendix presenting asymptotic estimates and series. .
