

1. Record Nr.	UNINA9910337644503321
Autore	Casaleiro João Carlos Ferreira de Almeida
Titolo	Quadrature RCoscillators : The van der Pol Approach // by João Carlos Ferreira de Almeida Casaleiro, Luís Augusto Bica Gomes Oliveira, Igor M. Filanovsky
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-030-00740-5
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (166 pages)
Collana	Analog Circuits and Signal Processing, , 1872-082X
Disciplina	621.381533
Soggetti	Electronic circuits Electronics Microelectronics Signal processing Image processing Speech processing systems Circuits and Systems Electronics and Microelectronics, Instrumentation Signal, Image and Speech Processing
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Sinusoidal Oscillators -- van der Pol Oscillator -- Injection Locking -- Active coupling RCoscillator -- Capacitive coupling RC-oscillator -- Two-integrator oscillator -- Conclusions.
Sommario/riassunto	This book presents a tutorial review of van der Pol model, a universal oscillator model for the analysis of modern RCoscillators in weak and strong nonlinear regimes. A detailed analysis of the injection locking in van der Pol oscillators is also presented. The relation between the van der Pol parameters and several circuit implementations in CMOS nanotechnology is given, showing that this theory is very useful in the optimization of oscillator key parameters, such as: frequency, amplitude and phase relationship. The authors discuss three different examples: active coupling RCoscillators, capacitive coupling RCoscillators, and two-integrator oscillator working in the sinusoidal

regime. · Provides a detailed tutorial on the van der Pol oscillator model, which can be the basis for the analysis of modern RCoscillators in weak and strong nonlinear regimes; · Demonstrations the relationship between the van der Pol parameters and several circuit implementations in CMOS nanotechnology, showing that this theory is a powerful tool in the optimization of key oscillator parameters; · Provides three circuit prototypes implemented in modern CMOS nanotechnology in the GHz range, with applications in low area, low power, low cost, wireless sensor network (WSN) applications (e.g. IoT, BLE).
