Disciplina	388.40973
Soggetti	Sociology, Urban Transportation engineering Traffic engineering Urban geography Transportation Political science Urban Studies/Sociology Transportation Technology and Traffic Engineering Urban Geography / Urbanism (inc. megacities, cities, towns) Governance and Government
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- The context of sustainable urban transport -- Three cities of the Americas: policies and instruments in Seattle, Montreal and Curitiba -- Conclusion on the data -- Looking to the Future.
Sommario/riassunto	This volume explores the governance patterns of three cities of the Americas, Seattle, Montreal, and Curitiba, which all present different but interesting cases in dealing with sustainable urban transport challenges. The authors study empirical data from these three cities to analyze how specific governmental and policy instruments (planning, consultation and market mechanisms for example) were implemented in each case. Through concepts coming from policy studies and sociology, for example, such as path dependency, institutional culture and transaction costs, the three cities are also looked at in a broader perspective in order to better understand how they deal differently with

their common challenges.
