The U.S. failure to pass a National Education Act, 1870-1940; Nancy Beadie -- Chapter 15. Forming the national body and framing the national minds: Constitutions, nation states, and the school laws in the long 19th century in Europe; Daniel Tröhler.

Sommario/riassunto

This book examines school acts in the long nineteenth century, traditionally considered as milestones or landmarks in the process of achieving universal education. Guided by a strong interest in social, cultural, and economic history, the case studies featured in the book rethink the actual value, the impact, and the ostensible purpose of school acts. The thirteen national case studies focus on the manner in which school acts were embedded in their particular historical contexts, offering a comprehensive and multidisciplinary overview of school acts and the role they played in the rise of mass schooling. Drawing together research from countries across the West, the editors and contributors analyse why these acts were passed, as well as their content and impact. This seminal collection will appeal to students and scholars of school acts and the history of mass schooling. Chapter 9 of this book is available open access under a CC BY 4.0 license at link.
