## Sommario/riassunto

The focus of this collection is on important themes in L2 acquisition, the nature of grammatical systems developed by language learners in L1 acquisition, third language acquisition, and bilingualism and language attrition. The chapters present an interesting mix of theoretical contributions, overview studies, and experimental designs exploring various research questions, such as learnability and access to UG, L1 influence, the nature of initial and endstate grammars, and variability. The linguistic domains investigated are also extremely diverse: morphosyntax, phonology, the lexicon, argument realization, language processing, and interface phenomena. This book, edited and written by McGill University alumni, is intended as a tribute to Lydia White's contribution to the field of generative second language acquisition. The authors present current work on language acquisition which further investigates several themes developed by White's research. Through these state-of-the-art contributions the reader will be able to identify important new directions in which generative language acquisition is developing and expanding.

| Sommario/riassunto      | This book offers a comprehensive and readable introduction to modern business and data analytics. It is based on the use of Excel, a tool that virtually all students and professionals have access to. The explanations are focused on understanding the techniques and their   |

proper application, and are supplemented by a wealth of in-chapter and end-of-chapter exercises. In addition to the general statistical methods, the book also includes Monte Carlo simulation and optimization. The second edition has been thoroughly revised: new topics, exercises and examples have been added, and the readability has been further improved. The book is primarily intended for students in business, economics and government, as well as professionals, who need a more rigorous introduction to business and data analytics – yet also need to learn the topic quickly and without overly academic explanations. .
