Collana	Wiley series in probability and statistics
Disciplina	615.50724
Soggetti	Clinical trials - Data processing Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references (p. 180) and index.
Nota di contenuto	Introduction -- Study design and planning -- Data definition, forms, and database design -- Computer systems for data management and data entry -- Patient registration -- Local data management systems -- Central quality control of data -- Data management and good clinical practice -- Software tools for trials management -- Follow-up and close-out phase -- Training, education, and documentation -- Clinical trials collaboration models.
Sommario/riassunto	A valuable new edition of the trusted, practical guide to managing data in clinical trials. Regardless of size, type, or complexity, accurate results for any clinical trial are ultimately determined by the quality of the collected data. <i>Management of Data in Clinical Trials, Second Edition</i> explores data management and trial organization as the keys to developing an accurate and reliable clinical trial. With a focus on the traditional aspects of data collection as well as recent advances in technology, this new edition provides a complete and accessible guide to the management structure of clinical trials.

Sommario/riassunto	This two-volume set LNCS 10305 and LNCS 10306 constitutes the refereed proceedings of the 15th International Work-Conference on Artificial Neural Networks, IWANN 2019, held at Gran Canaria, Spain, in June 2019. The 150 revised full papers presented in this two-volume set were carefully reviewed and selected from 210 submissions. The papers are organized in topical sections on machine learning in weather observation and forecasting; computational intelligence methods for time series; human activity recognition; new and future tendencies in brain-computer interface systems; random-weights neural networks; pattern recognition; deep learning and natural language processing; software testing and intelligent systems; data-driven intelligent transportation systems; deep learning models in healthcare and biomedicine; deep learning beyond convolution; artificial neural network for biomedical image processing; machine learning in vision and robotics; system identification, process control, and manufacturing; image and signal processing; soft computing; mathematics for neural networks; internet modeling, communication and networking; expert systems; evolutionary and genetic algorithms; advances in computational intelligence; computational biology and bioinformatics.
