

1. Record Nr.	UNINA9910337871503321
Autore	Leble Sergey
Titolo	Waveguide Propagation of Nonlinear Waves : Impact of Inhomogeneity and Accompanying Effects // by Sergey Leble
Pubbl/distr/stampa	Cham : , : Springer International Publishing : , : Imprint : Springer, , 2019
ISBN	3-030-22652-2
Edizione	[1st ed. 2019.]
Descrizione fisica	1 online resource (298 pages)
Collana	Springer Series on Atomic, Optical, and Plasma Physics, , 1615-5653 ; ; 109
Disciplina	531.1133 530.15
Soggetti	Physics Plasma (Ionized gases) Microwaves Optical engineering Lasers Photonics Sound Astrophysics Mathematical Methods in Physics Plasma Physics Microwaves, RF and Optical Engineering Optics, Lasers, Photonics, Optical Devices Acoustics Astrophysics and Astroparticles
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Evolution Operator and Projectors to Its Eigenspaces -- Electromagnetic waveguides -- Waveguide Mode Interactions. Coupled Nonlinear Schrodinger Equations -- Solitons -- Waveguide Propagation in Hydrodynamics -- Guide Propagation and Interaction of Plasma Waves. Metamaterials -- Nanowaveguides. Bloch Waves -- Microwaveguides. Magnetic Moment Transport -- Kinetics of Charges

in Waveguides. Charge Transport.

Sommario/riassunto

This book addresses the peculiarities of nonlinear wave propagation in waveguides and explains how the stratification depends on the waveguide and confinement. An example of this is an optical fibre that does not allow light to pass through a density jump. The book also discusses propagation in the nonlinear regime, which is characterized by a specific waveform and amplitude, to demonstrate so-called solitonic behaviour. In this case, a wave may be strongly localized, and propagates with a weak change in shape. In the waveguide case there are additional contributions of dispersion originating from boundary or asymptotic conditions. Offering concrete guidance on solving application problems, this essentially (more than twice) expanded second edition includes various aspects of guided propagation of nonlinear waves as well as new topics like solitonic behaviour of one-mode and multi-mode excitation and propagation and plasma waveguides, propagation peculiarities of electromagnetic waves in metamaterials, new types of dispersion, dissipation, electromagnetic waveguides, planetary waves and plasma waves interaction. The key feature of the solitonic behaviour is based on Coupled KdV and Coupled NS systems. The systems are derived in this book and solved numerically with the proof of stability and convergence. The domain wall dynamics of ferromagnetic microwaveguides and Bloch waves in nano-waveguides are also included with some problems of magnetic momentum and charge transport.
