Sommario/riassunto	"This book is an ideal resource for clinicians who need an accessible, clinically-focused guidance on cardiac pacemakers, ICDs and CRTs. Organized so that readers may follow a path from pacing basics to the most complicated topics and from initial patient presentation and indication for device therapy through trouble-shooting and long-term follow-up, the book is as easy-to-use as it is authoritative. Flowcharts and color images reinforce essential topics, and a companion website provides the full text of the book, downloadable images, and video clips of important techniques"--

Sommario/riassunto	This edited volume consists of three parts. It is a culmination of selected research papers presented at the second version of the international conference on Improving Sustainability Concept in

Developing Countries (ISDC) and the second version of the international conference on Alternative and Renewable Energy Quest in Architecture and Urbanism (AREQ), organized by IEREK in Egypt, 2017. It discusses major environmental issues and challenges which threaten our future. These include climate change impact, environmental deterioration, increasing demand for energy and new approaches for alternative renewable energy sources which became a necessity for survival. In addition to addressing the different environmental issues witnessed today, research presented in this book stressed on the need of sustainably shaping buildings and cities using renewable energy sources. Topics included in this book are (1) Resilience in the Built Environment, (2) Design for energy-efficient architecture and (3) Alternative and Renewable Energy Resources Quest in Architecture and Urbanism. The book is of interest to researchers and academicians who continuously aim to update their knowledge in these fields, as well as decision makers needing the enough knowledge to carry out the right decisions towards the benefit of the environment and society.
