Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Nota di contenuto	Introduction -- Chapter 1. Territorial Context -- Chapter 2. Regional Analysis and Diagnosis -- Chapter 3. Territorial Objectives and Strategies.
Sommario/riassunto	The book presents a unique example of integral planning at different scales and across different types of landscapes found on the outskirts of metropolitan areas. It features a sustainability-based plan to improve the evolution of the south-central area of the Calderona Mountain Range, Spain (Sierra Calderona). It is informed and driven by social, cultural, perceptual, sustainability and economic factors supported by a participative process. The plan addresses the frequent conflict between the management of natural and cultural values found in peri-urban areas and the strong pressure for transformation and public use. Incorporating new methodologies and graphical systems for regional and local planning, the plan provides a practical example of balanced and multidisciplinary planning, based on principles of sustainability, systems thinking, new governance and local adaptation.

This is volume one of a two-volume series. It elaborates on regional analysis and diagnosis, and on the definition of strategies for the following themes: natural environment, agriculture and livestock farming, urban environment and wellbeing, infrastructures and mobility, cultural heritage, tourism and public use, landscape, sustainability, socio-demography, economic development and governance. The book is intended for planners and researchers from various disciplines, including urban planning, forestry, agriculture, cultural and touristic management, and sustainability studies.
