

1. Record Nr.	UNINA9910453729903321
Autore	Blosser Patricia E
Titolo	How to ask the right questions [[electronic resource] /] / by Patricia E. Blosser
Pubbl/distr/stampa	Washington, DC, : National Science Teachers Association, c2000
ISBN	1-281-75840-X 9786611758400 1-935155-99-7
Descrizione fisica	1 online resource (16 p.)
Collana	How to
Disciplina	371.3/7 371.37
Soggetti	Questioning Teaching Electronic books.
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Note generali	Description based upon print version of record.
Nota di bibliografia	Includes bibliographical references.
Nota di contenuto	Types of Questions; Using Open Questions; The Value of Silence; Additional Factors Related to Questioning; Analyzing Your Questioning Behavior; Additional Suggestions to Consider; BIBLIOGRAPHY; A Classroom Example
Sommario/riassunto	Questions, questions, questions! They are a large part of a teacher's stock-in-trade. We use questions to help students review, to check on comprehension, to stimulate critical thinking, to encourage creativity, to emphasize a point, to control classroom activities, reduce disruptive behavior, to help determine grades, to encourage discussion, to discourage inattentiveness, and for other reasons and purposes. Questioning style and content varies from teacher to teacher, student group to student group, and situation to situation.

Autore	Shi Jiancheng
Titolo	Advances in Quantitative Remote Sensing in China - In Memory of Prof. Xiaowen Li
Pubbl/distr/stampa	MDPI - Multidisciplinary Digital Publishing Institute, 2019
Descrizione fisica	1 online resource (404 p.)
Soggetti	Geography
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	<p>Quantitative land remote sensing has recently advanced dramatically, particularly in China. It has been largely driven by vast governmental investment, the availability of a huge amount of Chinese satellite data, geospatial information requirements for addressing pressing environmental issues and other societal benefits. Many individuals have also fostered and made great contributions to its development, and Prof. Xiaowen Li was one of these leading figures. This book is published in memory of Prof. Li. The papers collected in this book cover topics from surface reflectance simulation, inversion algorithm and estimation of variables, to applications in optical, thermal, Lidar and microwave remote sensing. The wide range of variables include directional reflectance, chlorophyll fluorescence, aerosol optical depth, incident solar radiation, albedo, surface temperature, upward longwave radiation, leaf area index, fractional vegetation cover, forest biomass, precipitation, evapotranspiration, freeze/thaw snow cover, vegetation productivity, phenology and biodiversity indicators. They clearly reflect the current level of research in this area. This book constitutes an excellent reference suitable for upper-level undergraduate students, graduate students and professionals in remote sensing.</p>
