Sommario/riassunto

The Construction (Design and Management) Regulations require all those involved in construction to adopt an integrated approach to health and safety management. Clients, designers and contractors, as well as planning supervisors, must now work together to ensure that health and safety management issues are considered throughout all phases of a project. Appropriate procedures must be established to ensure that documentation is clear and a structured approach is adopted by all those involved in a project to ensure that the requirements of the regulations are complied with.

Sommario/riassunto	Creative Spaces: Urban Culture and Marginality is an interdisciplinary

exploration of the different ways in which marginal urban spaces have become privileged locations for creativity in Latin America. The essays within the collection reassess dominant theoretical notions of 'marginality' in the region and argue that, in contemporary society, it invariably allows for (if not leads to) the production of the new. While Latin American cities have, since their foundation, always included marginal spaces (due, for example, to the segregation of indigenous groups), the massive expansion of informal housing constructed on occupied land in the second half of the twentieth century have brought them into the collective imaginary like never before. Originally viewed as spaces of deprivation, violence, and dangerous alterity, the urban margins were later romanticized as spaces of opportunity and popular empowerment. Instead, this volume analyses the production of new art forms, political organizations and subjectivities emerging from the urban margins in Latin America, neither condemning nor idealizing the effects they produce.
