

1. Record Nr.	UNINA9910346722603321
Autore	Adler Bianca
Titolo	Boundary-Layer Processes Producing Mesoscale Water-Vapour Variability over a Mountainous Island
Pubbl/distr/stampa	KIT Scientific Publishing, 2014
ISBN	1000042282
Descrizione fisica	1 online resource (242 S p.)
Collana	Wissenschaftliche Berichte des Instituts für Meteorologie und Klimaforschung des Karlsruher Instituts für Technologie
Soggetti	Physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Over complex terrain, spatial inhomogeneities of pre-convective atmospheric conditions occur due to convection and mesoscale transport processes. This thesis focuses on the identification of these processes over the mountainous island of Corsica and on the evaluation of their impact on the spatial variability of water vapour, convection-related parameters and the evolution of deep convection by means of observations.
