

1. Record Nr.	UNINA9910346763503321
Autore	Munch David
Titolo	Begriffliche Situationsanalyse aus Videodaten bei unvollständiger und fehlerhafter Information
Pubbl/distr/stampa	KIT Scientific Publishing, 2017
ISBN	1-000-06697-5
Descrizione fisica	1 online resource (XVII, 241 p. p.)
Collana	Karlsruher Schriften zur Anthropomatik / Lehrstuhl für Interaktive Echtzeitsysteme, Karlsruher Institut für Technologie ; Fraunhofer-Inst. für Optronik, Systemtechnik und Bildauswertung IOSB Karlsruhe
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This work addresses the automatic detection of complex situations in image sequences in the video surveillance context. There are difficulties when dealing with data from natural environments. This work expands the formalism of FMTHL and SGTs to deal with erroneous, missing, and noisy data and complexity, demonstrates the robustness of situational recognition in natural scenarios, and expands generic applicability beyond discourse boundaries.
