The Comparative Study of Animal Traditions Beyond the Separation Between Humanities and Life Sciences -- Animal Learning: An Epistemological Problem -- The Obscure Object of Animal Subjectivity -- Intus-Legere: Knowledge as an Actualization Process -- Contributions of Ethology to the Birth of a Post-Anthropocentric Ethics -- A Re-Evaluation of Animal Interests Starting from a Critique of Maslow's Pyramid -- Behavioural and Cultural Epigenetics. The Social Biologisms Refuted by the Developments in Biology. |
| Sommario/riassunto      | The primary purpose of this book is to contribute to an overcoming of the traditional separation between humanties and life sciences which, according to the authors, is required today both by the developments of these disciplines and by the social problems they have to face. The volume discusses the theoretical, epistemological and ethical repercussions of the main acquisitions obtained in the last decades from the behavioral sciences. Both the authors are inspired by the concept of a "critical ethology", oriented to archive the nature/culture and human/animal dichotomies. The book proposes a theoretical and                                                                                        |

methodological restructuring of the comparative study of the animal behavior, learning, and cultures, focused on the fact that thought, culture and language are not exclusively human prerogatives. The proposed analysis includes a critique of speciesism and determinism in the ethical field, and converge with the Humanities, to which the series is dedicated, on a key point: it is necessary to arrive at an education system able to offer scientific, social and ethical skills that are transversal and transcendent to the traditional humanities/life sciences bipartition. Skills that are indispensable for facing the complex challenges of the contemporary society and promoting a critical reflection of humanity on itself.

| Sommario/riassunto      | In this work experimental tests are performed to investigate the<br>forming behavior of unidirectional non-crimp fabrics (UD-NCFs) within<br>the context of an automated preforming process. Based on the<br>experimental results, a macroscopic forming simulation model for UD-<br>NCFs is developed and model parameters are identified via the<br>simulation of material tests. The forming simulation model is validated<br>via hemisphere and car body part forming tests. |
