

1. Record Nr.	UNINA9910346771603321
Autore	Kotan Engin
Titolo	Ein Prognosemodell für die Verwitterung von Sandstein
Pubbl/distr/stampa	KIT Scientific Publishing, 2017
ISBN	1000054324
Descrizione fisica	1 online resource (Getr. Zahlung p.)
Collana	Karlsruher Reihe Massivbau, Baustofftechnologie, Materialprüfung / Institut für Massivbau und Baustofftechnologie ; Materialprüfungs- und Forschungsanstalt Karlsruhe
Soggetti	History of engineering and technology
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Sandstone is the most common kind of natural stone used for historic buildings in Central Europe. During the past century a dramatic increase in different types of damage to historic buildings, monuments and sculptures made from natural stone has been observed. The present work deals with theoretical aspects of strength loss, fracture processes and degradation during the decay processes.
