

1. Record Nr.	UNINA9910346772403321
Autore	Liebner Martin
Titolo	Fahrerabsichtserkennung und Risikobewertung für warnende Fahrerassistenzsysteme
Pubbl/distr/stampa	KIT Scientific Publishing, 2016
ISBN	1000053685
Descrizione fisica	1 online resource (XX, 159 p. p.)
Collana	Schriftenreihe / Institut für Mess- und Regelungstechnik, Karlsruher Institut für Technologie
Soggetti	Technology: general issues
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	To avoid accidents, warning driver assistance systems require an on-line estimation of the current risk of collision. For that, a new method is proposed that - in principle - is able to deal with arbitrary traffic situations. This is achieved by the use of generative models to describe the expected driver behavior. Corresponding user studies in real traffic show promising results even when real time constraints are taken into account.
