

1. Record Nr.	UNINA9910346917203321
Autore	Kremer Karsten
Titolo	Invariants of complex and p-adic origami-curves
Pubbl/distr/stampa	KIT Scientific Publishing, 2010
ISBN	1000015949
Descrizione fisica	1 electronic resource (VI, 74 p. p.)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Origamis (also known as square-tiled surfaces) are Riemann surfaces which are constructed by glueing together finitely many unit squares. By varying the complex structure of these squares one obtains easily accessible examples of Teichmüller curves in the moduli space of Riemann surfaces. Different Teichmüller curves can be distinguished by several invariants, which are explicitly computed. The results are then compared to a p-adic analogue where Riemann surfaces are replaced by Mumford curves.
