

1. Record Nr.	UNINA9910346918603321
Autore	Hennings Ulrich
Titolo	Sulfur-tolerant natural gas reforming for fuel-cell applications
Pubbl/distr/stampa	KIT Scientific Publishing, 2010
ISBN	1000014763
Descrizione fisica	1 electronic resource (II, 144 p. p.)
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	An attractive simplification of PEM-FC systems operated with natural gas would be the use of a sulfur tolerant reforming catalyst, but such a catalyst has not been available thus far. In this work it is demonstrated that a tailor made rhodium catalyst retains useful activity for typical sulfur levels in the feed. A brief economic comparison showed however that this alternative process is still less economical than the traditional process employing removal of sulfur components by adsorption.
