

1. Record Nr.	UNINA9910346933603321
Autore	Detert Martin
Titolo	Hydrodynamic processes at the water-sediment interface of streambeds
Pubbl/distr/stampa	KIT Scientific Publishing, 2008
ISBN	1000008267
Descrizione fisica	1 electronic resource (IV, 153 p.)
Collana	Dissertationsreihe am Institut für Hydromechanik der Universität Karlsruhe / Universität Karlsruhe (TH), Institut für Hydromechanik
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Simultaneous 2D pressure and 2D velocity information at the rough water-sediment interface of streambeds were gained by a newly developed measurement setup. In the bed the pressure fluctuations decay exponentially within the first 1-2 equivalent sand roughnesses. Structural findings concerning coherent flow structures are consistent with models originally developed for smooth walls. A significant bed destabilizing flow-pressure pattern was identified for the first time.
