

1. Record Nr.	UNINA9910346946103321
Autore	Edelmann Kevin
Titolo	Electroluminescence from Plasmonic Excitations in a Scanning Tunnelling Microscope
Pubbl/distr/stampa	KIT Scientific Publishing, 2019
ISBN	1000093148
Descrizione fisica	1 online resource (III, 136 p. p.)
Collana	Experimental Condensed Matter Physics / Karlsruher Institut für Technologie, Physikalisches Institut
Soggetti	Physics
Lingua di pubblicazione	Inglese
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	This work presents the design and commissioning of a new low-temperature Scanning Tunnelling Microscope equipped with an innovative light collection setup using an integrated, micro-fabricated mirror tip. Commissioning experiments demonstrate the capabilities of this new instrument and reproduce known effects regarding gap plasmons on noble-metal surfaces. Furthermore, different contrasts in the plasmon-mediated light emission from Cobalt nano-islands on a Copper (111) substrate are reported.
