

1. Record Nr.	UNINA9910346951103321
Autore	Ruf Miriam
Titolo	Geometrie und Topologie von Trajektorienoptimierung für vollautomatisches Fahren
Pubbl/distr/stampa	KIT Scientific Publishing, 2018
ISBN	1000085281
Descrizione fisica	1 online resource (XVII, 253 p. p.)
Collana	Karlsruher Schriften zur Anthropomatik / Lehrstuhl für Interaktive Echtzeitsysteme, Karlsruher Institut für Technologie ; Fraunhofer-Inst. für Optronik, Systemtechnik und Bildauswertung IOSB Karlsruhe
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	In order to establish general principles in the topic of motion planning for fully-automated driving, an intuitive problem statement in the form of an Euler-Lagrange Model is derived and transformed into a corresponding Hidden Markov Model for global optimization. Geometric and topologic considerations lead to a probabilistic environment modelling in combination with the C ² model and result in general conclusions about the structure of traffic situations.
