   Livello bibliografico   Monografia

   Sommario/riassunto   Previously, software architects were unable to effectively and efficiently
                         apply reusable knowledge (e.g., architectural styles and patterns) to
                         architectural analyses. This work tackles this problem with a novel
                         method to create and apply templates for reusable knowledge. These
                         templates capture reusable knowledge formally and can efficiently be
                         integrated in architectural analyses.
