Pubbl/distr/stampa	KIT Scientific Publishing, 2018
ISBN	1000078961
Descrizione fisica	1 electronic resource (XVIII, 362 p. p.)
Lingua di pubblicazione	Tedesco
Formato	Materiale a stampa
Livello bibliografico	Monografia
Sommario/riassunto	Existing business modeling languages (or their extensions) have time, identity and activity related contexts (or objects) for modeling business processes. In order to support a Context Aware Service, location awareness is needed to enable the application or process to control the related workflows. For the integration of location constraints into workflow models, a concept based on restrictions is being developed in the present work.
